

CONFIRMATION OF IMPLEMENTATION OF THE NORWEGIAN XML-FORMAT

This is to confirm that Atrion will adapt its SDS-system to the standardized XML-format (the joint Norwegian format) as agreed by the XML- forum.

Atrion will be a member of the XML-forum which gathers suggestions for improvements in the XML-format, and establishes new versions of the format. In this way, the SDS-system companies will actively take part in the development of the standardized XML-format. The company is also obliged to adapt their system to any new versions of the XML-format.

Please choose one of the following options:

<input type="checkbox"/>	Full implementation: The SDS-system will be adapted for both import and export of XML-files, in such a way that a complete exchange of information is assured.
<input type="checkbox"/>	Partial implementation - import: The SDS-system will be adapted to import information in XML-files. Users of the system will only be able to import information in to their own system, but will not be able to transfer information from their system to other systems.
<input checked="" type="checkbox"/>	Partial implementation – export: The SDS-system will be adapted for export of information in the XML-format. Users of the system will only be able to transfer information from their own system to other systems, but will not be able to import information in the standardized format in to their own system.

The system version must be made available for the Norwegian Product Register for testing and verification before a new version is made available for the customers. A list of valid system versions from different companies will be published on www.pib.no. Separate lists will be made for each new version of the XML-format.
